#### **PROJECTS**

## PHP based Blog Posting Site

APRIL 2020 - MAY 2020

Using PHP, JavaScript, BootStrap, and Mysqli. Developed a blog posting site featured with user authentication, weather report, news, and geolocation coordinate system that streams temperature and humidity data over the globe and broadcast breaking news in a more timely manner. By building this project, I have learned about:

- Javascript API's
- PHP Curl API
- PHPMailer Library

# Buffer Cache and Get Block Simulation

JANUARY 2020 - MARCH 2020

This project was my first application in MSc in the operating system and by developing this project, I assimilate and learned about:

- Scenarios of retrieval of buffers.
- Structure of the buffer pool and buffer header.
- Algorithms for reading and writing disk blocks.
- Working in a multiprocessing environment of a computer application.

### PHP Mailer System

FEBRUARY 2019 - APRIL 2019

Developed a user-friendly PHP mailer system using the PHPMailer library, which is embedded in a web application, used to send emails safely and easily via the webserver.
